In the Specification:

Please replace the paragraph beginning at page 5, line 4 with the following replacement paragraph:

An insulative blanket constructed in accordance with the present invention is illustrated in Figs. 2-3 and generally designated 10. As perhaps best shown in Fig. 3, the insulative blanket 10 generally includes an insulative layer 20, a pair of moisture-barrier layers 40a and 40b and a reflective layer 30. The moisture-barrier layers 40a and 40b are secured to each side of the insulative layer 20. The reflective layer 30 is laminated or otherwise secured to the outside of one of the moisture-barrier layers 40a or 40b. As shown in Fig. 3, the reflective layer 30 directly faces the curing concrete C. The present invention is described in connection with an insulative blanket adapted for use in standard construction applications. The present invention is, however, readily adapted for use in specialized applications, for example, by varying the material and or specifications of the moisture-impervious, insulative and reflective layers.
